

FastHRM Platform Guide

People operations, recruiting, performance and lifecycle — in one open platform

Product landscape · Free catalogue · 8 August 2026

01. One platform for the employee and candidate lifecycle

- **People operations** — employee records, departments, leave, attendance, pay and organisation data.
- **Recruiting** — publish job specifications, receive applications and run structured hiring workflows.
- **Performance** — align goals, collect feedback, run reviews and explain people signals.
- **Lifecycle** — coordinate onboarding, changes, separations, cases and workforce scenarios.
- **Platform** — public API, enterprise controls, analytics and AI-assisted work in the same Python application.

02. FastHRM at a glance

Measure	Current platform
Product pricing	Free across every available and coming-soon module
Available products	15
Coming-soon products	9
API resources	12 versioned resources
Public experiences	Landing · product catalogue · careers · job pages · candidate flows · developer docs
Delivery model	Open-source, self-hostable FastHTML application
Data model	SQLite with five ordered, additive migrations
Quality gate	Automated pytest suite plus Playwright browser verification

03. The platform is organised around four operating layers

Layer	Core capabilities	Primary users	Outcome
People system	Employees · departments · leave · attendance · payroll	HR operations · employees	Reliable people records and daily workflows
Talent system	Careers · ATS · CRM · scheduling · communications	Recruiters · hiring managers	Faster, more consistent hiring
Growth system	Performance · goals · feedback · lifecycle	Managers · HR business partners	Aligned performance and coordinated transitions
Control system	Analytics · enterprise · AI · API · audit records	Leaders · administrators · developers	Governed decisions and extensibility

04. Available products — people and talent

Product	Availability	Price	What teams can do now
Core HR	Available	Free	Manage employees, departments and reporting lines
Leave & attendance	Available	Free	Request, approve and report time away and attendance
Payroll & payslips	Available	Free	Review pay runs and itemised payslips
Recruiting ATS	Available	Free	Run requisitions, pipelines, interviews and offers
Careers publishing	Available	Free	Publish branded careers and individual job-spec pages
Candidate CRM	Available	Free	Search, tag, group and work candidate records
Communications	Available	Free	Use templates, scheduling, automation and surveys
Interview scheduling	Available	Free	Offer self-service booking and video/calendar contracts

05. Available products — intelligence and platform

Product	Availability	Price	What teams can do now
Recruitment marketing	Available	Free	Build campaign pages, assets and job distributions
Recruitment analytics	Available	Free	Measure funnels, sources, channels and experiments
Performance	Available	Free	Manage goals, feedback, reviews and signals
Employee lifecycle	Available	Free	Coordinate onboarding, changes and separations
Enterprise recruiting	Available	Free	Configure brands, sites, localisation and identity adapters
AI for HR	Available	Free	Extract CVs, rank candidates and draft content
Developer API	Available	Free	Integrate through typed, versioned OpenAPI resources

06. Coming soon means availability — not price

Product	Status	Price	Planned scope
Expenses & travel	Coming soon	Free	Claims, advances, approvals and travel requests
Shifts & time clocks	Coming soon	Free	Rostering, check-in/out and auto-attendance
Benefits administration	Coming soon	Free	Eligibility, enrolment and contribution tracking
Learning & development	Coming soon	Free	Courses, learning plans and certifications
Workforce planning	Coming soon	Free	Budgeted positions and headcount scenarios
Employee self-service	Coming soon	Free	Dedicated employee portal across core workflows
Statutory payroll	Coming soon	Free	Country tax, filing, benefits, loans and advances
Live provider integrations	Coming soon	Free	Production HRIS, calendar, board and messaging adapters
Granular RBAC & security	Coming soon	Free	Tenant scope, enforced visibility, 2FA and audit exports

07. Recruiters can publish each job as its own sub-page

- **Author** — capture public title, department, location, work model, employment type, compensation, description, requirements, benefits and SEO fields.
- **Control** — move through Draft, In review, Published, Closed and Archived states with version history.
- **Distribute** — publish to the main careers index, localized career sites and scheduled placements.
- **Convert** — accept configurable applications, CVs, cover notes and consent evidence directly into the ATS.
- **Discover** — expose canonical metadata, sitemap entries and JobPosting structured data for public roles.

08. The recruiter operating system keeps work connected

- **Projects and workflows** — configurable stages, templates, cloning, confidential projects and hiring teams.
- **Candidate collaboration** — comments, ratings, fields, tags, tasks, merge controls and drop reasons.
- **Talent pools** — rules, saved views, faceted search and targeted bulk job offers.
- **Decision quality** — scorecards, reminders, approvals, references and credential validity.
- **Hiring-manager workspace** — scoped projects, feedback, decisions, surveys and notifications.

The screenshot displays the FastHRM Recruiting platform interface. On the left is a sidebar menu with categories: OVERVIEW (Dashboard, AI Assistant), PEOPLE (Employees, Departments), TIME (Leave, Attendance), PAY (Payroll), and TALENT (Recruiting platform, Requisitions, Candidates, Offers, Analytics). The main content area is titled 'Recruiting platform' and includes tabs for Operations, Communications, Scheduling, Marketing & connectors, Analytics, and Enterprise. The 'Operations' tab is active, showing a 'Projects' table with columns for Project, Pipeline, Access, Candidates, and Actions. Below the table are sections for 'My tasks (1)', 'Pipeline templates', and 'Talent PDM'. On the right, there is an 'AI Assistant' chat interface with a 'New' button and a 'Send' button.

Project	Pipeline	Access	Candidates	Actions
People Ops Manager · REQ-2004	Applied, Screen, Interview, Offer, Hired, Rejected	Standard	6	Board Edit
Data Engineer · REQ-2005	Applied, Screen, Interview, Offer, Hired, Rejected	Standard	15	Board Edit
Product Designer · REQ-2002	Applied, Screen, Hiring manager, Interview, Offer, Hired, Rejected	Configured	9	Board Edit
Account Executive — DACH · REQ-2003	Applied, Screen, Interview, Offer, Hired, Rejected	Standard	11	Board Edit
Senior Backend Engineer · REQ-2001	Applied, Screen, Interview, Offer, Hired, Rejected	Standard	18	Board Edit
Customer Success Manager · REQ-2006	Applied, Screen, Interview, Offer, Hired, Rejected	Standard	0	Board Edit

09. Communications and automation preserve context

- **Mailbox workspace** — templates, signatures, HTML messages, AI drafts and scheduled send.
- **Channel history** — email/SMS delivery, read, click and bounce events on a single timeline.
- **Automation engine** — trigger messages, stages, tasks, tags, candidate requests and webhooks.
- **Candidate portal** — magic-link status, information requests, documents, interview choices and withdrawal.
- **Privacy workflows** — consent, corrections, export, anonymisation, deletion and retention controls.

The screenshot displays the FastHRM Recruiting platform interface. The left sidebar contains a navigation menu with categories: OVERVIEW (Dashboard, AI Assistant), PEOPLE (Employees, Departments), TIME (Leave, Attendance), PAY (Payroll), TALENT (Recruiting platform, Requisitions, Candidates, Offers, Analytics), PERFORMANCE (Goals & OKRs, Feedback, Review cycles, Signals), and LIFECYCLE (Onboarding, Changes, Separations). The main content area is titled 'Recruiting platform' and includes tabs for Operations, Communications (active), Scheduling, Marketing & connectors, Analytics, and Enterprise. The Communications tab is divided into three sections: 1. Recruitment mailbox: Features a 'Send queued' button, a 'Sync now' button, and a 'Connect mailbox' button. It includes a 'careers@fasthr.example' email address and a 'ms_graph' signature. 2. Templates and AI-assisted messages: Shows an 'Interview invitation' template. It has fields for 'Template name', 'Email', 'Subject with {{first_name}}', and 'Message HTML'. There are 'Save template' and 'Queue message' buttons. Below this, there are fields for 'Candidate ID', 'Email', 'Subject', and 'Message' with a date picker set to 'mm/dd/yyyy, --:-- --'. 3. Recent communication: A table with columns 'Candidate', 'Channel', 'Direction', 'Subject', 'Status', and 'When'. It shows one entry for 'Klara Jankowski' via 'email' in an 'outbound' direction with the subject 'Thanks for applying', status 'Queued', and timestamp '2026-08-08 04:46:29'. 4. Triggers & actions: A section for creating automation rules. It shows a rule named 'Screen-stage follow-up' triggered by 'when application.stage_changed' with a JSON payload: [{"type": "task", "title": "Prepare phone screen", "assignee": "admin@fasthr.example"}, {"type": "email", "subject": "Next steps", "body": "Hello {{first_name}}, we are preparing your next step."}]. The rule is set to trigger on 'application.stage_changed' with a stage of 'Screen' and an email body of 'Hello {{first_name}}'. There is a 'Save automation' button. On the right side of the interface, there is an 'AI Assistant' chat window with a 'New' button and a 'Send' button. The chat window contains a prompt: 'Ask about headcount, leave or attendance — or use /headcount/leave/help.' and a list of 'TRY ASKING:' suggestions: 'Who's on leave today?', 'Which team is biggest?', and 'How many leave requests are pending?'.

10. Scheduling and recruitment marketing extend reach

Workflow	Capabilities	Result
Scheduling	Availability · self-booking · calendar contracts · video links	Less interview coordination
Job distribution	Connector contract · multiposting · signed applicant intake	Consistent external publishing
Career content	Templates · media · campaigns · custom sites · localisation	Brand-aligned candidate journeys
Social assets	Sharing metadata · deterministic JPG exports	Reusable campaign creative
Copy assistance	Inclusive-language checks · AI job-ad drafts	Clearer, more inclusive specifications

11. Analytics connect activity to hiring outcomes

- **Operational views** — custom and group dashboards with reusable filters.
- **Funnel health** — stage conversion, source/channel performance and recruiter benchmarks.
- **Candidate engagement** — careers impressions, application conversion and attribution.
- **Communication effectiveness** — email delivery and engagement conversion.
- **Experimentation** — deterministic variants with assignment and outcome reporting.
- **Portability** — filtered CSV exports for downstream analysis.

12. Performance and lifecycle continue after hire

Moment	FastHRM workflow	Record created
Offer accepted	Convert candidate to employee	Employee, skills, leave allocation, onboarding
Onboarding	Coordinate HR, manager and employee tasks	Checklist and completion history
Growth	Align goals, check in and exchange feedback	Goal, key result and feedback history
Review	Run self/manager reviews and calibration	Review cycle and ratings
Change	Approve promotion, transfer or manager change	Effective-dated employee change
Separation	Track handover, exit tasks and interview	Separation and alumni state

13. AI assists decisions without hiding the evidence

- **CV extraction** — converts PDF/DOCX content into structured identity, employment, education and skills data.
- **Candidate ranking** — stores rationale and excludes protected identity fields from ranking inputs.
- **Screening controls** — weighted criteria, required gates, thresholds, overrides and anonymised review.
- **Writing support** — drafts job advertisements, candidate messages and offer content.
- **Grounded assistant** — answers from a live HR snapshot; deterministic slash commands work without a model key.
- **Traceability** — prompt versions, model, timing and raw extraction outputs remain diagnosable.

14. Enterprise controls are present — with limits stated clearly

- **Organisation model** — brands, career sites, teams, countries, departments and consolidated metrics.
- **Identity contracts** — SAML/OIDC verification adapters and SCIM provisioning endpoints.
- **Policy records** — conditional allow/deny rules, legal terms and data-processing controls.
- **Localization** — reviewed and AI-assisted translations across distributed career sites.
- **Current boundary** — role assignments exist, but granular tenant/query enforcement remains Coming soon.
- **Current boundary** — provider connector contracts exist, but production provider calls remain Coming soon.

The screenshot displays the 'Fast HRM' interface, specifically the 'Recruiting platform' section. The left sidebar lists various modules: OVERVIEW (Dashboard, AI Assistant), PEOPLE (Employees, Departments), TIME (Leave, Attendance), PAY (Payroll), TALENT (Recruiting platform, Requisitions, Candidates, Offers, Analytics), PERFORMANCE (Goals & OKRs, Feedback, Review cycles, Signals), and LIFECYCLE (Onboarding, Changes, Separations). The main content area is titled 'Recruiting platform' and includes tabs for Operations, Communications, Scheduling, Marketing & connectors, Analytics, and Enterprise. It features sections for 'Organizations, brands, and custom domains' (with fields for Organization, org-slug, Brand, brand-slug, and jobs.example.com), 'FastHRM Careers (site #1)' (with fields for Brand ID, Careers site, site-slug, and en), and 'FastHRM Product Careers (site #2)' (with fields for Organization ID, Team, Country code, and Add team). Below these are 'SSO, SCIM, and policy controls' (with fields for Organization ID, SAML, Identity provider, Entity ID, SSO/authorization URL, and Metadata) and 'AI screening profiles' (with fields for Organization ID, Policy name, recruiter/hrbp, candidate/salary, and read/update). The right sidebar shows the 'AI Assistant' with a chat interface and a 'Send' button.

15. A versioned API makes the platform extensible

- **Twelve resources** — employees, departments, leave, attendance, jobs, candidates, applications, organisations, brands, career sites, teams and distributions.
- **Public reads** — list and detail operations with typed schemas, pagination, search and filters.
- **Controlled writes** — declared create/update/delete operations require `FASTSME_API_TOKEN`.
- **Developer tools** — Swagger UI, ReDoc, runtime OpenAPI and a committed compatibility schema.
- **Stable errors** — clients receive structured code, message and details payloads.
- **Regeneration** — `scripts/generate_api_docs.py` prevents the committed contract drifting from runtime.

The screenshot shows the 'FastHRM Developers' page for 'API V1'. It features a header with 'Products' and 'Back to product' links. The main heading is 'Build with the FastHRM API.' followed by a description: 'Read the live demo database through a typed, versioned API. Selected integration writes are implemented behind bearer-token authentication.' Below this are four buttons: 'Open Swagger UI', 'Open ReDoc', 'Download swagger.json', and 'View on GitHub'. A light blue box contains 'Public preview access' details. At the bottom, an 'API contract' table lists various endpoints and their specifications.

CONCERN	CONTRACT
Base URL	https://hrm.fastsmc.com/api
Version	v1 · schema refreshed 2026-08-08
Pagination	?limit=20&offset=0 · maximum limit 200
Filtering	?q=search&status=value · available fields are documented per operation
Errors	{ "error": { "code": "...", "message": "...", "details": {} } }
Writes	Authorization: Bearer <token> · POST/PATCH/DELETE only where declared in OpenAPI

16. Architecture stays intentionally compact

Component	Responsibility
FastHTML + HTMX	Server-rendered user interface and partial interactions
FastAPI	Mounted <code>/api</code> application, typed schemas and OpenAPI
Domain modules	People, talent, recruitment, communications, ecosystem and enterprise logic
SQLite	Operational records with additive migration ledger
Background work	CV extraction and asynchronous processing
Playwright	Browser walkthroughs, screenshots and public-flow regression checks
Docker + Coolify	Reproducible image and GitHub-triggered production deployment

17. Trust, security and operating boundaries

- **Synthetic defaults** — the repository demonstration data contains no real personal information.
- **Credential handling** — configured integration secrets are encrypted at rest and masked in the UI.
- **Candidate controls** — consent evidence, privacy requests, retention actions and upload validation are recorded.
- **Publishing controls** — admin, HRBP and recruiter roles gate job-publication actions.
- **Deployment identity** — `/healthz` and `/about` identify the running commit and environment.
- **Roadmap priority** — tenant isolation, enforced RBAC, CSRF, distributed rate limiting, malware scanning, 2FA and exportable security logs remain Phase 0 work.

18. Recommended adoption path

- **Week 1** — configure organisation basics, career brand, departments, roles and API access policy.
- **Week 1** — create a requisition, preview the job specification and publish its public sub-page.
- **Week 2** — define the hiring workflow, scorecard, forms, templates and interviewer availability.
- **Week 2** — invite hiring managers and test a candidate journey from application to portal.
- **Week 3** — enable dashboards, retention policies and selected automation triggers.
- **Before production PII** — complete the open Phase 0 security controls and validate configured provider adapters.

19. Sources and scope

- **Repository** — implementation, migrations, tests and [README.md](#), reviewed 8 August 2026.
- **Product status** — [docs/product_roadmap.md](#) and synchronized [docs/change_log.md](#).
- **Public catalogue** — [/products](#); every listed product is Free and delivery state is explicit.
- **Developer contract** — [/developers](#), [/api/openapi.json](#), [/api/docs](#) and committed [swagger.json](#).
- **Screenshots** — deterministic local seeded environment; no production candidate or employee data.
- **Boundary** — “Available” means a working FastHRM surface exists; provider-dependent and security-hardening scope is described separately.

Appendix 04. Requisition workflow

Recruiters configure stages, project settings and approvals beside the requisition.

The screenshot displays the FastHRM Recruiting platform interface. The left sidebar contains a navigation menu with sections: OVERVIEW (Dashboard, AI Assistant), PEOPLE (Employees, Departments), TIME (Leave, Attendance), PAY (Payroll), TALENT (Recruiting platform, Requisitions, Candidates, Offers, Analytics), PERFORMANCE (Goals & OKRs, Feedback, Review cycles, Signals), and LIFECYCLE (Onboarding, Changes, Separations). The main content area is titled "Product Designer" and includes a sub-header "Drag candidates between stages; every move is audited". Below this is the "Project controls" section with fields for "Product" (set to "Product & Engineering"), "Clone title", "Clone project", and checkboxes for "Continuous hiring" and "Confidential". The "Applied" section lists candidates: Bo Virtanen (Senior Designer), Solveig Adeyemi (UX Designer), Casper Demir (Senior Designer), Dmitri Olsen (Design Lead), and Solveig Vasquez (Design Lead). The "Screen" section is empty. The "Hiring manager" section is empty. The "Interview" section lists Casper Bakker (Design Lead). The "Hiring team" section shows the hiring manager's email and name, with checkboxes for "Can decide" and "Salary access". The "Application form, internal audience, and scheduling" section shows the attached form "Standard application". The right sidebar contains the "AI Assistant" section with a "New" button and a chat input field. The top right corner shows the user's name, email, and a "Logout" button.

Appendix 05. Candidate record

Structured CV data, applications, skills and evidence remain connected to one profile.

The screenshot displays the FastHRM interface for a candidate profile. The left sidebar contains navigation links for Overview, People, Time, Pay, Talent, Performance, and Lifecycle. The main content area shows the profile for Priya Raman, a Senior Backend Engineer. The profile includes sections for Details, Education, Applications, Skills, and Experience. The Skills section shows 11 extracted skills, including Python, Go, Airflow, Java, Kafka, Kubernetes, Oracle, Postgres, Terraform, distributed systems design, and payments domain. The Applications section shows a table with columns for Requisition, Stage, Status, and Applied. The Documents & extraction section shows a table with columns for File, Kind, Size, and Upload. The Experience section shows a table with columns for Role, Company, and Dates.

TRY ASKING:

- Who's on leave today?
- Which team is biggest?
- How many leave requests are pending?

Appendix 06. Goals and alignment

Company, team and individual goals connect through measurable key results.

Appendix 07. Employee onboarding

Accepted offers create coordinated lifecycle work without re-keying candidate data.

The screenshot displays the FastHRM Onboarding interface. The sidebar on the left contains navigation links categorized under OVERVIEW, PEOPLE, TIME, PAY, TALENT, PERFORMANCE, and LIFECYCLE. The 'Onboarding' link is highlighted. The main dashboard area shows the 'Onboarding' section with a subtitle 'Checklists started automatically when an offer is accepted'. It features four summary cards: ONBOARDING (4, 15 overdue tasks), PENDING CHANGES (1, awaiting approval), SEPARATIONS (3, in progress), and OPEN CASES (4, 1 alumni). Below these is an 'In progress' table listing new hires with columns for Name, Department, Start date, Tasks, Progress, Overdue, and Status.

New hire	Department	Start date	Tasks	Progress	Overdue	Status
Idris Berglund Senior Backend Engineer	Engineering	2026-08-18	0 / 10		—	Probation
Tariq Sato HR Business Partner	People & Culture	2026-03-07	5 / 10		5	Probation
Nina Sato Operations Manager	Operations	2026-02-25	6 / 10		4	Active
Nina Larsen Product Manager	Product	2026-02-23	4 / 10		6	Active

On the right side of the interface, there is an 'AI Assistant' chat window with a 'New' button and a text input field. Below the chat window is a 'TRY ASKING:' section with three suggested questions: 'Who's on leave today?', 'Which team is biggest?', and 'How many leave requests are pending?'. A 'Send' button is located at the bottom right of the chat area.

Appendix 08. Public developer surface

Developers can inspect resources, examples and the current OpenAPI contract without signing in.
